Objective

Aspiring software and machine learning engineer with hands-on experience in IT support, seeking to build scalable applications and intelligent systems that solve real-world problems.

Experience

- Bagco Nigeria**
Jan 2022 - August 2022
IT Support
 - Resolved 50+ technical support requests weekly, reducing system downtime and improving staff productivity.
 - Provided first- and second-level support across applications and network systems.
 - Supported implementation of IT security policies, improving compliance and reducing unauthorized access risks.
 - Assisted in managing user access controls and maintaining IT asset inventory.

Education

Course / Degree	School / University	Grade / Score	Year
Computer Science/B.Tech	Federal University of Technology Owerri	2nd Class Honors (Upper Division)	2017-2023

Skills

- Python Programming
- Machine Learning
- Data Science
- Android Development (Java)
- Web Application Development
- Writing

Projects

- Kidney Disease Prediction Model (Python, Scikit-learn)**
Developed an ensemble of deep learning models for disease detection using medical dataset.
- Fake News Detection System using Deep Learning and Transformers (Python, NLP)**
Developed a fake news detection system using natural language processing techniques and advanced deep learning models. Implemented and compared architectures including BiLSTM and transformer-based models such as DistilBERT and SciBERT, achieving improved text classification performance.

Publications

- Investigation of ensembles of deep learning models for improved chronic kidney diseases detection in CT scan images**
Co-authored research on deep learning ensembles for chronic kidney disease detection using CT scan images, improving diagnostic accuracy through model combination techniques.

Interests

- Writing
- Reading
- Chess
- Video games
- Football

Languages

- English
- Igbo
